PROJECTS

Lobal Chess Academy Management System

Developed a full-stack academy management application for managing students, attendance, payments, receipts, reports, dashboard insights, and settings. Implemented a shared payment service architecture with validation, monthly duplicate prevention, receipt generation, and transaction-safe payment processing. Built production-focused workflows including attendance limits and fee reminders.

- Next.js, React, TypeScript, Tailwind CSS, Prisma, PostgreSQL
- Student management, attendance tracking, payments and receipt generation
- Reports, dashboard, settings, and actionable fee-reminder workflow
- Authentication and database-driven business logic

BrewFlow POS / Business Management System

Developing a production-oriented POS and business management application designed around shop-based operations. The architecture organizes business data by shop and supports core business workflows such as billing, inventory, expenses, customers, suppliers, dashboard analytics, and reports.

- Modern application architecture with database-backed business modules
- Shop-centric data model for multi-business operations
- POS, inventory, expenses, customers, suppliers, and reporting workflows
- Designed with production-ready engineering and scalable module separation

Movie Management Web Application

Developed a web-based Movie Management System using Python and Django with user authentication, Django ORM, MySQL integration, and CRUD functionality for movie records.

- User authentication and authorization
- Add, view, edit, and delete movie records
- Django MVT architecture and database integration
